                                                                                                                                                                                                                                                                                                                 The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating diseases states characterised by cerebral amyloid haemorrhage with amyloidses of the Dutch type and haemorrhagic caroke. The present sequence represents one of a group of peptides (AAVI1648-AAVI1669, AAVI1910 & AAVI1911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid anglopathy (CAA)
                                                                                                                                                                                                                                                       Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
        Amyloid-beta40 inhibitor, Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amyloid-beta40 inhibitor, Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide #9, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorinage with amyloidosis of the Dutch type and heemorinagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeca40) inhibitor. The Abeca40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                     Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            All-D-amyloid-beta peptide, Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyslonephiritis; osteomyalitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.

                                                                                                                                                                                                               The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D - amyloid-beta peptide. The method is used for preventing and/or treating CAlzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and carounce of soluble amyloid-beta in a mammal and carounce of soluble amyloid-beta in a mammal and cannot be considered the mammal; and reducing or inhibiting the formation of plaques. It is the mammal; and reducing or inhibiting the formation of plaques. It is can filammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriatis, juvenile chronic arthritis, ankylosing spondylitis, psoriatis, juvenile chronic carbitists. Adeposite are also produced as a result of chronic microbial infections (preferably leprossy, tuberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, otberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, otberculosis, bronchiectasis, desease).

Cortain malignant neoplasms can also result in AA fibril amyloid deposits cincluding Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cerebrovascular disease; cardiovascular disease; memory loss; anxiety; behavioural dysfunction; neurological condition; psychological condition; vaccine antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease, and (b) as second agent (a2) that is: (i) a peptide or peptidonimetic that modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have corropic, neuroprotective, cerebroprotective, haemostatic, (C) have noctropic, neuroprotective, cerebroprotective, haemostatic, compathic, antichyroid, vasotropic, cardiovascular, tranquilliser, uropathic, anticonvulsant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, amyloid angiopathy, hereditary cerebral hemorrhage, senile dementia, amyloid angiopathy, hereditary cerebral hemorrhage, senile dementia, common's syndrome, inclusion body myositis, age-related macular conductance and properly and properly and properly and angiopathy, anxiety, a behavioural dysfunction (e.g. apathy, disease, memory loss, anxiety, a behavioural dysfunction (e.g. Huntington's aggression, or incontinence), a neurological condition (e.g. Huntington's

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease; and (b) as a second agent (a2) that is: (i) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have nootropic, neuroprotective, cerebroprotective, haemostatic, ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser, outpathalmological, antithyroid, vasotropic, cardiovascular, tranquilliser, neuroleptic, cardiant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, mild-to-moderate cognitive impairment, vascular dementia, cerebral complexity anglopathy, hereditary cerebral haemorrhage, senile dementia, complete the syndrome, inclusion body myositis, age-related macular condition associated with Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          discusse, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, disease, anyotrophic lateral sclerosis, acquired immunodeficiency, Parkinson's disease, aphasia, apraxia, agnosia, pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual field deficits, incoordination, galt disturbance, transient ischaemic attack or stroke, transient alettness, attention deficit, frequent falls, syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural haematchoms, brain tumour, posttraamatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, delusions, illusion, halluchantion, sexual disorder, weight loss, psychosis, a sleep disturbance, insomnia, behavioural disinibition, poor insight, suicidal disturbance, insomnia, behavioural disinibition, poor insight, suicidal controlly and the service of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ideation, depressed mood, irritability, anhedonia, social withdrawal, or excessive guilt)) in a subject e.g. human having a genomic mutation in an amyloid precursor protein gene, an ApoE gene, or a presentlin gene; having amyloid-beta deposits. The present sequence represents a peptide that can be used as an antifibitillogenic amyloidosis inhibiting peptide in the exemplification of the present invention.
                                                                                                    that prevents or treats amyloid-beta related disease and second agent
that is either a peptide or peptidomimetic or an immune system modulator.
                                                                Composition for treating e.g. Alzheimer's disease comprises first agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

The present invention describes a nucleic acid molecule (I) comprising a consecutive nucleic acid sequence (S1) of at least 15 bp in length and complementary with a nucleic acid sequence encoding a prolamine polypeptide or a nucleic acid sequence having a homology of at least bolypeptide or a nucleic acid sequence having about 70% homology to a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide; (2) a factor (II) capable of causing RNA interference of the gene sequence encoding a prolamine polypeptide; (3) a factor (II) capable of causing RNA interference of the gene sequence encoding a prolamine polypeptide; (3) a factor (II) capable of causing RNA interference (IV) comprising (I); (6) a plant cell (V) producing (III); (7) a plant tissue (VII) containing (I); (8) a vector (IV) comprising (I); (8) a plant (VIII) containing gene product of foreign gene produced by (VIII); (10) starch preparation produced from (VIII); and (II) a composition containing gene product of foreign gene produced from (VIII).

(I) is useful for decreasing the expression level of a protein in the seed of a plant, for expression of a natural protein in the seed of a plant involves providing (I) introducing (I) into the cell of the plant, radifferentiating the cell, producing a transgenic plant. And obtaining the seed from the transgenic plant, and obtaining the seed from the transgenic plant and of expression of expecting mobile encoding a foreign gene in the seed of a plant involves providing (I) and the mucleic acid molecule encoding a foreign gene product into cell of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   96.6%; Score 28; DB 8; Length 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the calmodulin (CaM)-binding region of mouse inducible nitric oxide synthase (NOS). iNOS is one of three isoforms of the enzyme NOS, which synthesises nitric oxide from the amino acid L-arginine. The sequence is provided for comparison with endothelial nitric oxide synthase (eNOS). The threonine residue at position 495 of eNOS is phosphorylated by AMP-activated protein kinase (AMPK) in the absence of Ca2+-CaM. Phosphorylation results in inhibition of eNOS. In the presence of Ga2+-CaM, phosphorylation by AMPK occurs predominantly at Ser-1177 and treatment of ischaemic heart disease by promoting glucose and farty acid metabolism, and improving nutrient and oxygen supply to the myocytes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vasotropic; antiangiogenic; gene therapy; critical limb ischaemia; CLI; eNOS; endothelial nitric oxide synthase; angiogenesis; microvascular dysfunction; human; calmodulin binidng domain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a method of creating critical limb ischaemia (CLI) comprising administering to a patient a polymucleotide encoding a mammalian eNOS (endothelial nitric oxide synthase) polymeptide. Also described are: a method for treating angiogenesis by administering to a patient a polymucleotide encoding eNOS, and ameliorating microvascular dysfunction by administering to the patient the polymucleotide encoding the eNOS polypeptide. The method is useful for treating critical limb ischaemia or angiogenesis, or ameliorating a microvascular dysfunction. This is the amino acid sequence of a human neuronal nitric synthase (nNOS) calmodulin binding domain peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mouse iNOS calmodulin-binding site amino acid sequence SEQ ID NO:7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      administering to a patient a polynucleotide encoding a mammalian endothelial nitric oxide synthase (eNOS) polypeptide.

The present sequence is a polypeptide encoded by one of a large number of 5. ESTs derived from mRNAs encoding secreted proteins. The 5. ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the calmodulin-binding site of mouse iNOS amino acid sequence. The present invention describes endothelial nitric coxide synthase (eNOS) mutants having one or more mutations in an amino acid sequence corresponding to a functional domain of a mammalian eNOS.

At least one of the mutations is at a position corresponding to an amino acid sequence corresponding to a functional domain that is phosphorylated in mammalian cells, and not an amino acid substitution to Ala or Asp. Also described: (1) an isolated eNOS polypeptide mutant that is substantially commologous, or has a 95-94 sequence identity to the amino acid sequence of the novel eNOS polypeptide mutant; (2) an isolated polypuclocitie concoding the polypeptide mutant; (3) a recombinant vector comprising the polymetic operably linked to at least one regulatory sequence; (4) a plarmaceutical composition comprising the polypeptide mutant; (6) modulating eNOS activity in a cell by administering the polypeptide mutant or the polymetide mutant; (7) modulating eNOS activity in a cell by administering the polypeptide mutant or the polymetide mutant or the polymetide mutant or the polymetide mutant or the polymetide condition and (9) prophylactic and activity by administering the polymetide mutant or the polymetic of a patient with the polymucleotide, and detecting a level of eNOS activity by administering a condition associated with aberrant eNOS activity by administering a condition associated with aberrant eNOS activity by administering a condition associated with aberrant eNOS activity, antilipaemic and anorectic contivity by administering a condition associated with aberrant eNOS activity, antilipaemic and anorectic activity by administering a condition associated with aberrant eNOS activity. The eNOS mutant polymetide and mutant or polymetide mutant, polymetide and mutant or polymetide activity. The eNOS mutant, polymetide and mutant or polymetide activity or activity andiabancial archaecting a condition associated activity and ac

                                                                                                                                                                           The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to ytyckine, cell proliferation or cell differentiation or which may induce production of other cytckines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytckine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

This invention, in the area of plant biotechnology, relates to novel polynucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, may augarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is the sequence of a rice protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   plant biotechnology; carbohydrate synthesis; carbohydrate metabolism;

polynucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain and the expression of which is up-regulated during grain [11] in the plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is the anno acid sequence of a rice protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fit, wipo.int/pub/publishedpct_sequences.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) and acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome expression by rectifying mutations or deletions in a patient's genome cupplement the patients own production of (1). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the patients own production of (1). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the protein. (I) proteins and polynucleotides may be used to prevent, chagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic exquences from the present invention. AAK84992 to AAK84950 and AAM82169 represent theman immune/haematopoietic antigen genomic sequences from the present invention. AAK84921 co AAK84950 and AAM82169 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 11; SEQ ID NO 11385; 3071pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 28; DB 4; Length 190;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to 2495 novel polynuclectides (I) and their encoded polypeptides, sequences hybridizing to these nuclectides, sequences encoding partial polypeptides and sequences having 70% to 30% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein sequence of the invention.

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A selected from one of the 2722 sequences defined in the specification. A diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnostic and invention molecules, e.g. cell proliferative disorders, endocrine attoinmune/inflammatory disorder, developmental disorders, or disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp concleus may also be used in genetic ampping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline colymorphisms, as molecular weight markers, and for somatic or germline colymorphisms, as equence data for this patent is not represented in very the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                              ä
                                                                                                                                                                                                                                                                                                  New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or

                                                                                                                                                                                                                                                                This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles on the formation, differentiation and maintenance of mulicellular corganisms. The fate of many individual cells (for example proliferation, corganisms. The fate of many individual cells (for example proliferation, corganisms. The fate of many individual cells (for example proliferation, corganisms. The information is trypically governed by information is order transmitted by secreted polypeptides (for example mitogenic conservation is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cyctocoxic factors, differentiation factors, cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand inheractions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manifacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mitochondrial; human; screening assay; diabetes mellitus;

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with alternamic chondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial composition and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       bronchial asthma; chronic obstructive pulmonary disease;
respiratory epithelial cell; interleukin-13; respiratory; antiasthmatic;
                                                                                                                                                                                                                                                                                                                                                    Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

(GENO-) GENOX RES INC

```
The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene comprises from a healthy subject, and judging whether the subject has bronchial sample from a healthy subject, and judging whether the subject has bronchial sample from a healthy subject, and judging whether the subject has bronchial sample from a healthy cells are stimulated with interleukin-13; or (b) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are trimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels descrasse when respiratory epithelial cells are trimulated with interleukin-13. Also described: (1) a reagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (5) a method for producing an animal model for bronchial asthma or chronic obstructive pulmonary disease, (5) a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease, (6) a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the expression of the gene through an RNAi effect or an antibody recognising a protein encoded by a marker gene; and (7) a protein encoded by a marker gene; and (7) a protein encoded by a marker gene; and man and (7) a marker gene. (1) has respiratory and antiasthmatic activities and can be used in gene therapy. The method is an antisense therapeutic for promoterine that experiently for the compound the protein encoded by a marker gene, and can be a pe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             asthma; chronic obstructive pulmonary disease;

correpresent invention describes a method of resting to be between the present invention describes a method of comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a beathy comprised to the marker gene in a biological sample from a healthy complexer, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent corresponding to an animal model for bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a marker gene or an animal model for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, a sthma or chronic obstructive pulmonary disease, comprising to a portion of the marker gene or an antisense, number of corresponding to a portion of expression of the gene through an RNAi effect or an antibody recognising corresponding asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene; and (7) a DNA chip for testing for corresponding to a portion of the probable asthma or a chronic obstructive pulmonary disease, numbered and antiasthmate activities, and can be used in gene therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present compounding that a stranger or an antiabely of the gene in a constitution of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                    present invention describes a method of testing for bronchial asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 925;

                                                                                                                                                                                                                                                                                                               The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                               Schoenfeld J, Williams PM, Wood WI;

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antininflammatory, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarteriosclerotic, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarteriosclerotic, immunomodulator, cerborotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immunomed specific will also an inflammatory disorder. In inflammatory disorder in inflammatory disorder. An inflammatory disorder in inflammatory disorder in inflammatory disorder in inflammatory disorders. All the specific ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, immunodeficiency, viral infection, host cell cetodermal dysplasia, viral replication, host cell cetodermal dysplasia, viral replication, host cell cetodermal dysplasia, viral replication, sick bowel disease, colitis asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necetic seconds in cells infected organ transplant rejection, conditions related to organ transplant conditions prelated to organ transplant conditions, birth defects, necetic seconds disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human protein which is subject to the novel association with the NP-kappaB pathway of the inventor of the province of the papear in the specification but
                                                                                                              New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRO; antiinflammatory; antiarthritic; antirheumatic; immunosuppressive;

Identifying an agent that modulates the function of an apoptosis-associated polypeptide, useful for diagnosing or treating e.g. cancer, comprises comparing the binding of the polypeptide to the candidate agent

to a control agent.

This invention relates to novel agents that modulates the function of human apoptosis-associated proteins specified within the specification. C human apoptosis-associated proteins specified within the specification. Specifically, it refers to a method for the identification of target can associated with an early stage in the certains of apoptosis. The present invention describes a method of regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide, a small inhibitory dsRNA, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, they exhibit cytostatic, antiinflammatory, immunosuppressive and control of protective activities. These may also be used for drug screening protein, an enzyme associated with the regulation of apoptosis whose cyce expression is modulated by novel agents of the invention.

The invention relates to antisense compounds, especially oligomucleotides, which are targeted to a nucleic acid encoding inducible nitric oxide synthase and which specifically hybridise to and modulate expression of inducible nitric oxide synthase. The antisense compounds have immunomodulator, antidiabetic, cardiovascular, cardiant, neuroprotective, disorder and vasotropic activity. The antisense oligomucleotides are useful for inhibiting the expression of inducible nitric oxide synthase in cells or tissues. In particular, the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense oligonucleotides for modulating the expression of inducible nitric oxide synthase in cells or tissues, particularly useful for treating e.g. immunological, cardiovascular or neurological disorders, or
                                                                                                                  The invention relates to two DNA molecules encoding inducible nitric oxide synthase (iNOS) proteins, where the DNA molecules comprise defined sequences of 4041 and 4165 base pairs given in the specification and the proteins have 1144 and no acids. Also claimed are expression vectors containing the DNA molecules, and recombinant host cells containing the vectors. The DNA molecules are useful for producing the recombinant proteins. The present sequence represents inducible nitric oxide, long isoform. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense oligonucleotide; inducible nitric oxide synthase; modulate expression; immunomodulator; antidiabetic; cardiovascular; cardiant; neuroprotective; vasotropic; ischaemia; reperfusion injury; 2'-0-methoxyethyl; phosphorothioate; mouse.
                    DNA encoding inducible nitric oxide synthase proteins - useful for producing recombinant proteins.
                                                                                                                                                                                                                                                                                                                                            Length 1144;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inducible nitrogen monoxide synthase (iNOS) was isolated from mice, and is encoded by AAQ94252. iNOS is homodimer with a mol. wt. of 130 kDA per subunit. The activity of iNOS is independent of calmodulin and cellular calcium levels. Vectors conteg. the DNA are used in the treatment or prevention of vascular diseases, high blood pressure, arteriosclerosis, etenosis or restenosis of blood vessels, esp. coronary vessels after percutane transluminal coronary angioplasty. See AAR77363 and AAR77362 for endothelial and brain-derived NOS

Oligonucleotides are useful for treating diseases or disorders associated with inducible nitric oxide synthase, e.g. diabetes, immunological disorder, cardiovascular disorder, neurological disorder or ischaemia/reperfusion injury. The antisense oligonucleotides are also useful for research and diagnostics. The present sequence is that of mouse inducible nitric oxide synthase

                                                                                                                                                                                                                                                                            Sequence 20, Application US/09747408
; Sequence 20, Application US/09747408
; Patent No. 6670399
; GENERAL INFORMATION:
    APPLICANT: Gereen, Allan M.
    APPLICANT: Gereen, Allan M.
    TITLE OF INVENTION: Compounds And Methods For Modulating;
    TITLE OF INVENTION: Corebral Amyloid Angiopathy
    FILE REFERENCE: NB-088
; CURRENT FILING DATE: 2200-12-22
; FRIOR APPLICATION NUMBER: 60171,877
; PRIOR FILING DATE: 1999-12-23
; NUMBER OF SEQ ID NOS: 24
; SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 20
ILENGTH: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3, Application US/08970833
Patent No. 6022859
Patent No. 6022859
CENERAL INFORMATION:
APPLICANT: Kiessling, Laura L.
APPLICANT: Murphy, Regina M.
TITLE OF INVENTION: INHIBITORS OF BETA-AMYLOID TOXICITY
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:

Sequence 24, Application US/09724961

Patent No. 674427
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Schenk, Dale B.
APPLICANT: Vadaquez, Nicki
APPLICANT: Vadaquez, Nicki
APPLICANT: Vadack, Ted
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
FILE REPERENCE: 152704-004750UC
CURRENT APPLICATION NUMBER: US/09/724,961
CURRENT FILING DATE: 2000-11-28
; OTHER INFORMATION: Description of Artificial Sequence:10-mer peptide; OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; OTHER INFORMATION: peptide)
US-09-724-961-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: Schenk, Dale B.

Sequence 21, Application US/09724551

Patent No. 6787637

GENERAL INFORMATION:

APPLICANT: Schenk, Dale B.

APPLICANT: Bard, Frederique

APPLICANT: Bard, Frederique

APPLICANT: Fedneck, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

TITLE OF INVENTION: P. 2000-11-28

CURRENT FILING DATE: 2000-11-28

FRIOR FILING DATE: 2000-16-26

PRIOR FILING DATE: 1999-05-28

PRIOR FILING DATE: 1999-05-28

NUMBER OF SEQ ID NOS: 77

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 21

LENGTH: 10
                                                                                                                                                                                                                                                               CTHER INFORMATION: Description of Artificial Sequence:10-mer peptide, OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; CTHER INFORMATION: peptide)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

```
definition actu testicutes with other amilion are produced using formation actual testicutes with other amilion are produced using formation amilion actual testicates of self proteins. The all-D peptides meed not be avoid the drawbacks of self proteins. The all-D peptides meed not be aggregated to be operative or immunogenic. They preferably interact with at least I region of an amyloid protein, e.g. the beta-sheet region or GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidominetics. Examples include all-D peptides and immunogenic peptide and the all-D derivative peptides given in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-I response, preventing fibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, neurodegenerative diseases, scrapie, cerebral amyloid angiopathy, and prion protein related disease, scrapie, cerebral amyloid angiopathy, and prion protein related disease, scrapie, cerebral amyloid angiopathy, and prion protein related disease, or systemic amyloidosis associated with theumatoid arthritis), familial mediterranean fever (FMF) and systemic amyloidosis found in long-term haemodialysis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New amyloid-targeting imaging agents useful for in vivo imaging amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; diabramyloidosis; feline spongiform encephalopathy; diabrain barrier; diabraemer's disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; ecrebral amyloid angiopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                   Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB25622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more
                                       Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The camploid targeting moiety, a linker moiety and a labelling moiety. The capent is of general formula At-(Allnk) 2-Allab(1) where z = 0 - 1;

CA t = an amyloid targeting moiety. All of the moiety; and Allab companies amyloid targeting mayloid are imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving camploid to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition comprising companies and companies and the imaging of the preparation and use of the radiopharmaceutical in the instructions for the preparation and use of the radiopharmaceutical in the instructions of amyloid or an amyloid-related condition. The agent, and condition comprisible condition amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (CUD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CUD), kuru, transmissible creephalopathy (BSE), inflammation-associated amyloidosis, falline spongiform encephalopathy, non-transmissible creephalopathy (BSE), inflammation-associated amyloidosis, light chain-related amyloidosis, light formin the harveling minety of the conserve and are capable of binding specifically promediated indiagates. The

```
The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral heamorinage with amyloidosis of the Dutch type and heemorinagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11659, AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Corbn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D - amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid

angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA Tecactive) amyloid diseases including the formation of plaques. It is inflammatory disease e.g. rheumatorid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's clisease. Ad deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, disease).

Colerain malignant meoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present invention describes compositions (C) comprising: (a) a limit a general (a) that pervents or treats amyloid-beta related disease; and (b) a second egent (a2) that is: (i) a peptide or peptidomimetic that a general against amyloid-beta fibril formation; or theirsee a prophylactic or modulates amyloid-beta fibril formation; or theirsee a prophylactic or their prevents or inhibite amyloid-beta (ii) an immune system modulator that prevents or inhibite amyloid-beta (fibra immune system modulator that prevents or inhibite amyloid-beta (fibril formation. Also described is a kit comprising (C). (C) have contropic, neuroprotective, extitovascular, tranquilliser, uropathic, anticonvulsant, antidepressant, endocrine and hyporica activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating anyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, vascular dementia, amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, on the condition associated with Alzheimer's disease (including hypothyroidsm, cerebral haemorrhage, senile dementia, on you's anyloid angiopathy, hereditary cerebral haemorrhage, andiovascular (including hypothyroidsm, cerebral disease, cardiovascular disease, amyloid suprothyroidsm, cerebral disease, cardiovascular disease, amyloid sesse, anxiety, a behavioural dysimution (e.g. Huntington's continence); actorior of the deficits, incoordination, galt disturbance, reason, or incontinence); actorior of the deficits, incoordination, galt disturbance, sensory loss, and condition (e.g. dupression, disturbance, insomina, behavioural disturbance, respective, transient alertness, attention deficit, frequent falls, and the deficits, incoordination, galt discurbance, with leave and modulation, galt discurbance, insomina, behavioural discurbance, ins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 amyloid-beta; amyloid-beta related disease;

The present invention describes compositions (C) comprising: (a) a first agent (11) that prevents or treats amyloid-beta related disease; and (b) a genond agent (a2) that is: (i) a peptide or peptidenimetic that modulates amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta albril formation; or (ii) an immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have notrophic, neuroprotective, carebroprotective, heamostatic, ophthalmological, antithyroid vasotropic, cardiovascular, tranquilliser, notrophic, neuroprotective, and satisfaction and interportective, and satisfaction and interportective, and satisfaction and interportective, and satisfaction beta related disease e.g. Alzheimer's disease (including sporadic manus system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic manus system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic manual experience), a neurological angiopathy, hereditary or erebral heamorrhage, senile dementia, own's syndrome, inclusion body myositis, age-lelated macular disease, memory loss, anxiety, a behavioural disease, cardiovascular disease, memory loss, anxiety, a behavioural disease, printing or rincontinence), a neurological condition (e.g. apathy, agraciase amyotrophe, altered muscle tone, selzures, sensory loss, anxiety, a perapidate confidence, incondination, gait disturbance, transient ischaemic telad deficits, incoordination, gait disturbance, transient ischaemic strasser, or stroke, transient alertness, attention deficit, frequent falls, syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural disease, veribence, transient alertness, attention deficit, progradial organical confidence or sensitivity, organical disease, soributed apposites the deficits, dependence and describence and describence and d senile dementia; Down's syndrome; inclusion body myositis; ger-related macular degeneration; hypothyroidism; cerebrovascular disease; cardiovascular disease; memory loss; anxiety; behavioural dysfunction; neurological condition; psychological condition; that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator. Composition for treating e.g. Alzheimer's disease comprises first agent /note= "D-form residues" Disclosure; Page 67; 143pp; English. The invention describes an isolated inhibitory peptide (1) which interacts with a hydrophobic beta-sheet forming cluster of amino acid cresidues on a protein or peptide for amyloid or amyloid-like deposit formation, and inhibits or structurally blocks the abnormal folding of proteins and peptides into amyloid or amyloid-like deposits and into optides into amyloid or amyloid-like deposits and into classases associated with abnormal protein folding into amyloid or amyloid or deposits, such as Alzahenimer's disease, bown's syndrome, other amyloidosis disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease (UD), Gerstmann-Straussler-Scheinker syndrome (GSS), prion associated human neurodegenerative diseases as well as amimal prion diseases but as scrapie, spongiform encephalopathy, transmissible mink encephalopathy and chronic wasting disease of mule deer and elk. (I) is also useful for chronic wasting disease of mule deer and elk. (I) is also useful for chronic wasting disease of mule deer and elk. (I) is also useful for chronic manyloid associated with the inhibition of amyloid or amyloid like ö pathological beta-sheet-rich conformation; Down's syndrome; amyloidosis disorder; human prion disease; kuru; CJD; Creutzfeldt-Jakob disease; Gerstmann-Straussler-Scheinker syndrome; GSS; prion associated human neurodegenerative disease; animal prion disease; scrapie; spongiform encephalopathy; transmissible mink encephalopathy; Novel inhibitory peptides which inhibit and structurally block abnormal folding of protein into amyloid or amyloid-like deposit and into pathological beta-sheet rich conformation, useful for treating Alzheimer's disease. The invention relates to a human fusion antibody for preventing and treating senile dementia. The antibody recognises and binds the beta-amyloid peptide and the fibres generated by it. The human antibody FC segment recognized by human immunocells are sequentially contained by its terminals from to C. The fusion gene coding for the antibody is also disclosed. This sequence represents the sequence of a anti-beta-amyloid peptide antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Beta-amyloid; modulator; amyloid plaque; brain lesion; amyloidosis; cerebral blood vessel; Alzheimer's disease; amyloidogenic protein; familial amyloid cardiomyopathy; isolated cardiomyopathy; isolated cardiac amyloidosis; systemic senile amyloidosis; insulinoma; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; urticaria; adult-onset diabetes; familial Mediterranean fever; therapy; deafiness; scrapie; familial amyloid nephropathy; hereditary cerebral haemorrhage.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to inhibitory peptide comprising a portion of at least three amino acid residues and a sequence predicted not to adopt a beta-sheet structure that associates with a hydrophobic beta-sheet cluster on a protein or peptide involved in the abnormal folding into a beta-sheet structure, to structurally block the abnormal folding into a protein or peptide. The inhibitory peptide is useful for preparing a composition for preventing, treating or detecting disorders or diseases associated with amyloid-like fibril deposits e.g. Alzheimer's disease and prion related encephalogathies. The invention is also useful in gene therapy. The present sequence is a peptide used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New inhibitory peptide, useful for preparing a composition for diagnosing, preventing or treating disorders associated with amyloid-like fibril deposits, e.g. Alzheimer's disease, or prion related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; beta-amyloid peptide; Alzheimer's disease; amyloidogenic protein; aggregation; neurotoxicity; amyloidosis; Down's syndrome; cardiomyopathy; familial amyloid polyneuropathy; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; bAP.
                                                                                                                                                                                                                                                                                                                               AAW02110-W02332 represent the peptide portions of the beta-amyloid modulator compounds of the invention. Beta-amyloid peptide is a 4 kilodaltor peptide that is the major protein component of amyloid plaques. Amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The amyloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupled directly or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declain, a cholanyl group, a biotin containing group, or a fluorescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    amyloidogenic proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as familial amyloid cardiomyopathy, isolated cardiac amyloidosis, premic senile amyloidosis, scrapie, bovine spongiform encephalopathy, Creuzfeld-Jakob disease, adult-onset diabetes, insulinoma, familial Mediterranean fever, familial amyloid and other types of amyloidosis. The modulators are also useful for the treatment of disorders associated with beta-amyloidosis, especially Alzheimer's disease
                                                                                                                                Garnick MB, Gefter ML, Hundal A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes beta-amyloid peptide (bAP) derivatives. The bAP derivatives inhibit aggregation of amyloidogenic proteins and peptides, specifically bAP, and their neurotoxicity, so are useful for treating and preventing any disease involving amyloidosis, specifically Alzheimer's disease but also Down's syndrome, familial amyloid polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and Creutzfeldt-Jakob disease. The bAP derivatives are also used to disgnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives. Some bAP derivatives inhibit bAP aggregation even when bAP is present in molar excess. The present sequence represents a bAP derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Beta-amyloid; amyloid modulator; amyloidogenic protein; amyloidosis; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; familial amyloid cardiomyopathy; isolated cardiac amyloid; systemic senile amyloidosis; scrapie; myeloma; bovine spongiform encephathy; BSE; Creutzfeldt-Jakob disease; adult onset diabetes; Geretmann-Straussler-Scheinker syndrome; insulinoma; atrial amyloidosis; idiopathic amyloidosis; haemodialysis; macroglobulinaemia-associated amyloidosis; reactive amyloidosis; primary localised cutaneous nodular amyloidosis; Sjogren's syndrome; hereditary cerebral haemorrhage with amyloidosis; Muckle-Wells syndrome; hereditary non-neuropathic systemic amyloidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptide(s) derived from beta-amyloid peptide that inhibit amyloid aggregation - and neurotoxicity, specifically for treatment and prevention of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                            Hundal A, Gefter ML, Kasman L, Musso G, Molineaux S, Benjamin H;

The present invention describes an amyloid modulator compound (I)

CC comprising an aggregation core domain and a modifying group attached to

CC comprising an authorist core domain and a modifying group attached to

it. (I) has nootropic, neuroprotective, immunosuppressive, antimicrobial,

CC antidiabetic, antipyratic, dermatological, cardiovascular, nephrotropic

and auditory activities, and can be used as a natural amyloid aggregation

CC inhibitor and a neurotoxicity inhibitor of natural bard amyloid aggregation

CC interact and an emucitority inhibitor of natural beta amyloid deposition such as

CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

CC disease and other clinical occurrences of beta amyloid deposition such as

CC disease, syndrome individuals and in patients with hereditary cerebral

CC haemorrhage with amyloidosis, and for treating a disorder associated with

CC mayloidosis such as familial amyloid polyneuropathy. (I) reduces the

CC toxicity of natural beta AP aggregates to cultured neuronal cells. (I)

CC toxicity to reduce the neurotoxicity of performed A-beta fibrils. The

CC exemplification of the present invention

CC exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Amyloidogenic protein; therapy; amyloidosis; familial amyloid polyneuropathy; cardiomyopathy; systemic senile amyloidosis; bovine spongiform encephalopathy; czertemic senile amyloidosis; bovine spongiform encephalopathy; czeutzeldt-Jakob disease; derstmann-Straussler-Scheinker syndrome; diabetes; insulinoma; myeloma; Sjogren's syndrome;
amyloidogenic disease; beta amyloid deposition; amyloidosis;
hereditary cerebral haemorrhage; familial amyloid polyneuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

The invention relates to amyloidogenic proteins or peptide fragments aggregation modulators. The invention is used for treating disorder associated with amyloidosis, particularly familial amyloid polyneuropathy (Portuguese, Japanese and Swedish types), familial amyloid cardiomyopathy (Danish type), isolated cardiac amyloid, systemic senile amyloidosis, crapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, gerapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, carapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, insulinoma, isolated atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or macroglobulinemia-associated amyloidosis, primary localized cutaneous nodular amyloidosis associated with Sjogren's syndrome, reactive (secondary) amyloidosis, familial amyloidosis of celandic type, amyloidosphropathy with urticaria and deafness (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis of celandial amyloid polyneuropathy III), familial amyloidosis (familial amyloidosis polyneuropathy III), familial amyloidosis (fibrinose associated contains amyloidosis contains and polyneuropathy III), familial amyloidosis (fibrinosen associated contains and contains amyloidosis contains and contains and contains amyloidosis contains amyloidosis contains amyloidosis contains and conta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

ADQ37351 standard; peptide; 7 AA

Beta-amyloid modulator peptide.

07-OCT-2004 (first entry)

BX5XX

ADQ37351;

```
amyloid-beta; amyloid-beta related disease;

No samyloid-beta; amyloid-beta related disease;

No samyloid-beta; mani-lord-beta related disease;

No samitodocolar vecreenforcated manoranti; puritation modificat; manus response; modification modificat; manus system modulator;

No sandidocolar disease; midi cognitiva impairment; wasuliar demonstale;

No sandidocolar disease; midi cognitiva impairment; wasuliar demonstale;

No sandidocolar disease; midi cognitiva impairment; wasuliar demonstale;

No sandidocolar disease; manifi cognitiva impairment; wasuliar demonstale;

No sandidocolar disease; manifi cognitiva impairment; wasuliar demonstale;

No sandidocolar disease; manifi cognitiva impairment; wasuliar demonstale;

No cerebrowascular disease; candidocolar disease; manora position;

No cerebrowascular disease; candidocolar disease; manora position;

No cerebrowascular disease; candidocolar disease; manora position;

No condostion for trasting e.g. Altheirer's disease comprises first agent that prevents or trasts anyloid-beta fibril by.

No condostion for trasting e.g. Altheirer's disease comprises first agent that is either a peptido or peptidominetic or an immune system modulator.

No condostion for trasting e.g. Altheirer's disease comprises first agent that is either a peptido or peptidominetic or indices a prophylatic or composition for trasting e.g. Bellini P.

No condostion for trasting e.g. Altheirer's disease prophylatic or composition for trasting e.g. Bellini P.

No condostion for trasting e.g. Altheirer's disease prophylatic e.g. disease and second agent composition for indices a prophylatic or composition or indices a prophylatic entry of composition or indices a prophylatic or composition or indices a prophylatic or composition or indices a prophylatic or conditions and composition or indices a prophylatic or conditions and conditions and proper and conditions and proper and composition or indices a prophylatic or conditions and proper and proper and proper and proper and prophylatic disease modula

Beta-amyloid peptide is a 4 kilodalton peptide that is the major protein component of amyloid the plaques. Amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The amyloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupled directly or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declain, a cholanyl group, a fluctin containing group, or a flucescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural
                                                                                                                                                                             ô
excessive guilt)) in a subject e.g. human having a genomic mutation in an amyloid precursor protein gene, an ApoE gene, or a presentlin gene; having amyloid-beta deposits. The present sequence represents a beta-amyloid modulator peptide which is used in the exemplification of the

The present invention describes beta-amyloid peptide (bAP) derivatives. The bAP derivatives inhibit aggregation of amyloidogenic proteins and peptides, specifically bAP, and their neurotoxicity, so are useful for treating and preventing any disease involving amyloidosis, specifically Alzheimer's disease but also bown's syndrome, familial amyloid polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and creutzfeldt-Jakob disease. The bAP derivatives are also used to disagnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives inhibit bAP aggregation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; beta-amyloid peptide; Alzheimer's disease; amyloidogenic protein; aggregation; neurotoxicity; amyloidosis; Down's syndrome; cardiomyopathy; familial amyloid polyneuropathy; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; bAP.
amyloidogenic proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as familial amyloid cardiacomyopathy, familial amyloid cardiacomyopathy, isolated cardiac amyloidosis, systemic senile amyloidosis, scrapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset diabetes, insulinoma, familial Mediterranean fewer, familial amyloid emphropathy with urticaria and deafhess, hereditary cerebral haemorrhage and other types of amyloidosis. The modulators are also useful for the treatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide(s). derived from beta-amyloid peptide that inhibit amyloid aggregation - and neurotoxicity, specifically for treatment and prevention of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hundal A, Gefter ML, Kasman L, Musso G, Molineaux S, Benjamin H;

even when bAP is present in molar excess. The present sequence represents a bAP derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amyloid modulator useful for treating a disorder associated with amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an amyloid modulator comprising an amyloidogenic protein and/or peptide fragment coupled to a modifying group so that the compound modulates the aggregation of natural amyloid proteins or peptides. The modulator is used for treating a disorder associated with amyloidosis e.g. familial amyloid oradiomyopathy (Portuguese, Japanese and Swediash types), familial amyloid cardiomyopathy (Portuguese, Japanese spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset diabetes, Gertaman-Straussler-Scheinker syndrome, insulinoma, isolated atrial amyloidosis, diopathic (primary) amyloidosis, myeloma or macroglobulinaemia-associated amyloidosis, primary localised cutaneous
                                                                                                                                                                                                                                                                                                                             familial amyloid polyneuropathy; familial amyloid cardiomypathy; isolated cardiac amyloid, systemic senils amyloid cardiomypathy; boxine scardiac amyloid, systemic senils amyloidosis, scrapie; myeloma; boxine spongiform encephalopathy; BES; Creutzfeldt-Jakob disease; adult onset diabetes; Gerstmann-Straussler-Scheinker syndrome; insulinoma; atrial amyloidosis; idiopathic amyloidosis; haemodialysis; macroglobulinaemia-associated amyloidosis; reactive amyloidosis; primary localised cutaneous nodular amyloidosis; Sjogren's syndrome; hereditary cerebral haemorrhage with amyloidosis; Muckle-Wells syndrome;
                                                                                           Gapa
                                                                                                                                                                                                                                                                                                                    Beta-amyloid; amyloid modulator; amyloidogenic protein; amyloidosis;

ö
decondary) amyloidosis, familial Mediterranean Fever and familial amyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis of Icelandic type, amyloidosis associated with long term haemodialysis, hereditary nonneuropathic systemic amyloidosis (familial amyloidosis associated with medullary carcinoma of the thyroid, fibrinogen-associated hereditary renal amyloidosis and lysozyme-associated hereditary systemic amyloidosis. The compound is capable of altering and inhibiting beta-amyloid protein (beta-AP) aggregation of natural amyloidosis, protein sor peptides when contacted with a molar excess amount of natural beta-APs relative to the modulator. This sequence represents a fragment of the long form of beta-amyloid used in the creation of an amyloid modulator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an amyloid modulator compound (I) comprising an aggregation core domain and a modifying group attached to it. (I) has nootropic, neuroprotective, immunosuppressive, antimicrobial,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease such as Alzheimer's disease comprises an aggregation core domain
